¹ When transferring pumpable waste at berths 05 and 06 of the oil port, bigger problems may occur whenever the tankers only have an aft connection nozzle for the disposal since the line to be produced may not be routed unsupported across the water of the port basin between the suction vehicle and the ship. In order to comply with the statutory duty of ROSTOCK PORT GmbH to enable also such tankers to dispose of their waste at the port of Rostock it is necessary in the a/m cases to run an additional hose connection from the transfer station along the ship's deck to the disposal vehicle.
